

Psychology - Learning Plus

What should students be doing in the ISA for Psychology?

Revising content

- Review notes from a recent class. This should be done little and often. This can take the form of ensuring notes are complete in enough detail or identifying areas of difficult content and using an effective revision method. ([flashcards/mind map/Cornell](#)).
- Complete your booklets for each unit, pay attention to the wider issues & debate boxes and the exam questions on the back sheet.
- Revise content from an earlier part of the course. Use our RAG checklists (all on teams) to identify areas of concern and prioritise these. Use effective methods of revision to develop these key areas.
- Revision guides are available to use alongside class notes, copies in the ISA and S12.
- Use the 'Myrevisionnotes' free resources [here](#) for interactive quizzes and exam questions.
- Pick up your tracking progress booklet from S12, use the feedback you have been given to rewrite/redraft work.
- Research methods are fundamental in Social Sciences. Create 'Method Mind-Maps' to revise the key features and evaluation points.
- Use SCRUM and GRAVEY to evaluate Psychological studies and theories.
- Create a glossary of definitions to use throughout the course.

Extending knowledge through extra reading/listening

- Use the [PsychBoost](#) YouTube channel to help revise and consolidate your learning.
- Pick up a Psychology review and select research articles related to your course.
- Listen to the Podcast '[PsychCrunch](#)', this will extend your course knowledge and will help you apply this knowledge to other contemporary issues.

Practice Questions

- These should only be attempted after sufficient content knowledge has been completed.
- You can plan these out, answer them in full and check your work against the mark schemes.
- Past question for each unit are on the last page of your booklet.
- Full exam papers and examiner feedback can be found [here](#).
